

Sensitivity of KM3NeT deep-sea neutrino telescope to galactic sources

F. Jouvenot

J. Carr, D. Dornic, G. Maurin

representing the KM3NeT consortium

Toward the kilometre cube...

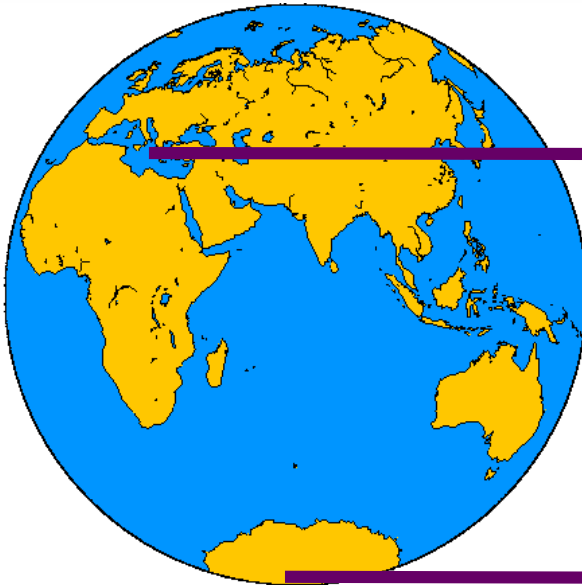

[Introduction](#) | [Neutrino Telescopes](#) | [KM3NeT](#) | [Nessy](#) | [Configuration study](#) | [Astrophysical sources](#) | [Next steps](#)

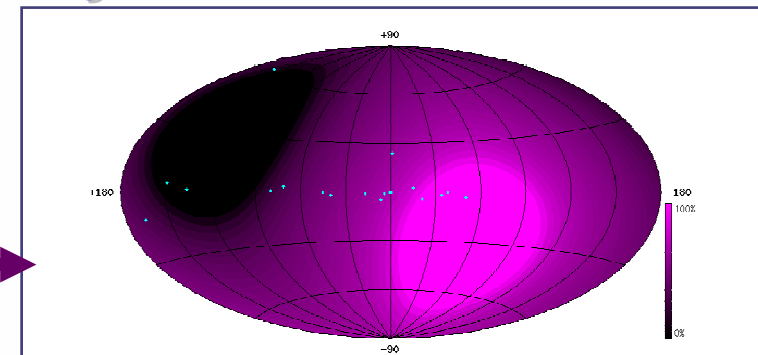

Fabrice Jouvenot

The 28th of August | TeVPA Conference

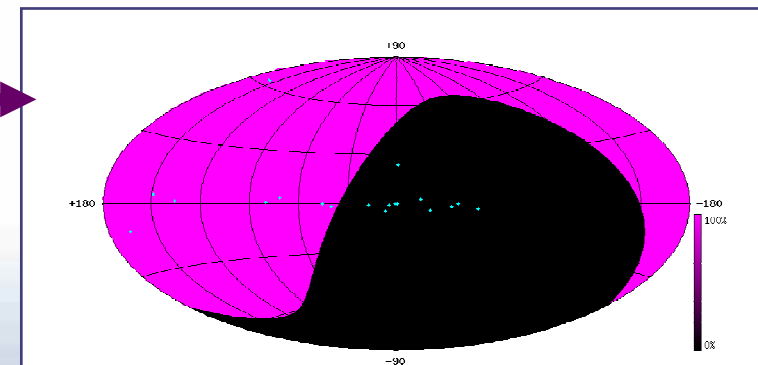

View of the sky

- Instant view : 2π sr
- Integrated view for a day : 3.5π sr

Mediterranean Sea
*43° North : Galactic centre
observed 2/3 of the time*

South pole

KM3NeT

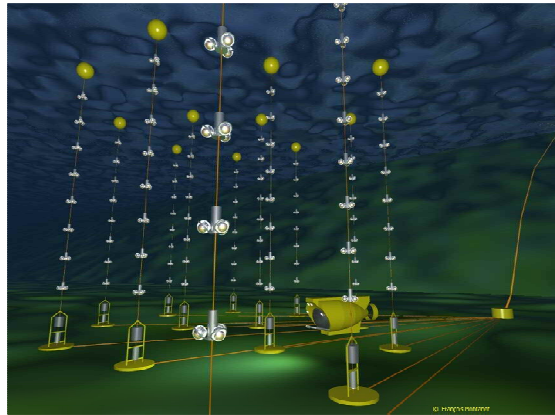

Design study

FP6 European funding for a 3 year design study

2006 - 2008

How to Design a km³ Deep-Sea ν Telescope

scale up

- Too expensive
- Too complicated
production, deployment takes forever, maintenance impossible
- Not scalable
(readout bandwidth, power, ...)

dilute

PM distance

given by absorption length in water and PM properties

- Efficiency loss for larger spacing

new design

- Cost-effective solutions
to reduce price/volume by factor 2-5
- Stability
goal: maintenance-free detector
- Fast installation
time for construction & deployment less than detector life time
- Improved components

Nessy Steering

Track Generator

Isotropic & uniform muon track
Muon Spectrum
Detector geometry
Water Properties

Hit simulation

Time smearing (*TTS, Chromatic*)
K40 & biolum background
Photoelectron conversion
Electronics (*ARS*)

KM3 & Antares Data Interface

Selection and Reconstruction

Hit selection
Trigger
Reconstruction

Effective Area

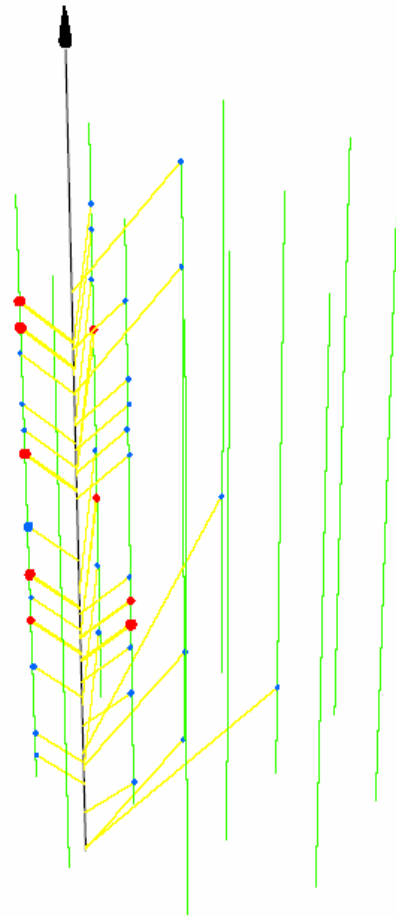

Muon
Neutrino

Astrophysics

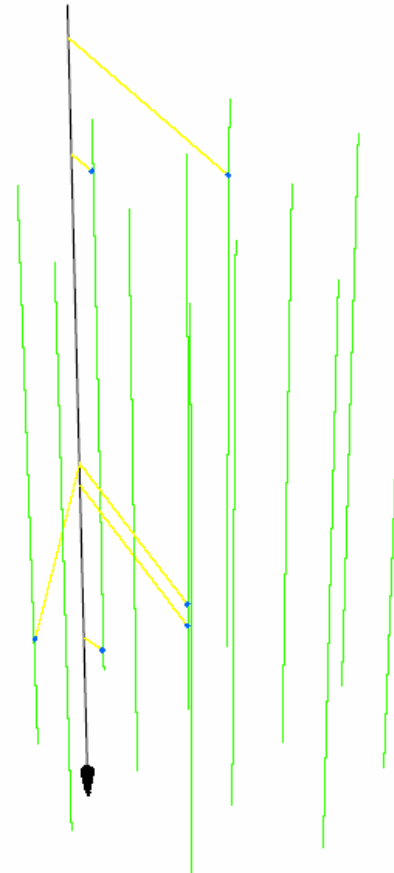

Source simulation
Probability of detection

Generated event

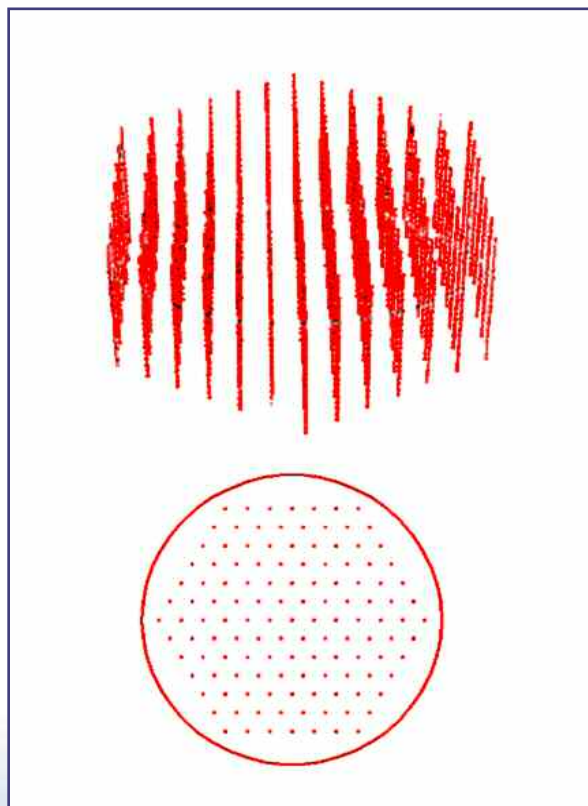

Typical upward going event

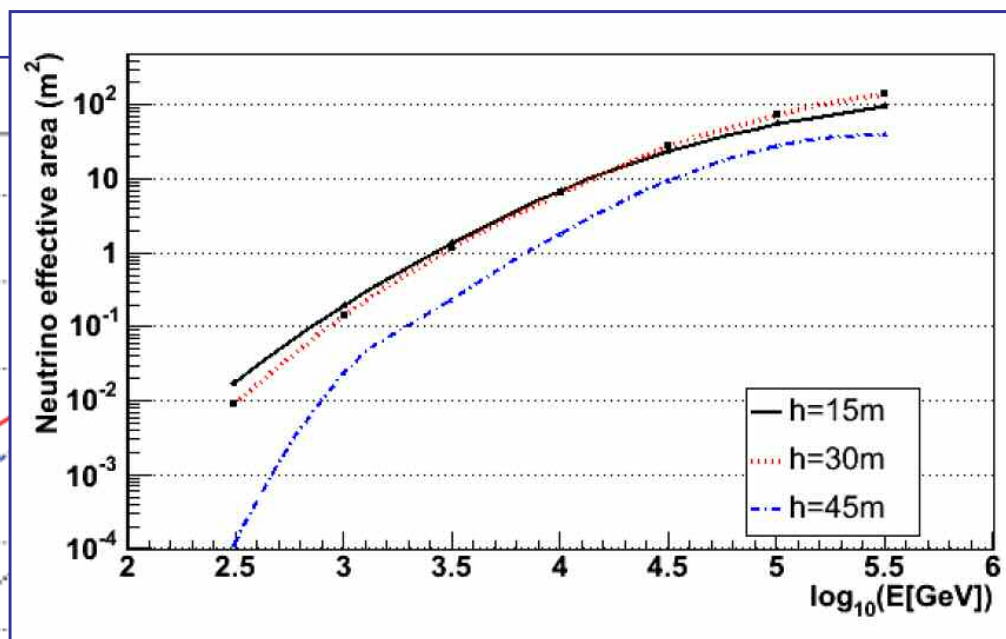

Typical downward going event

Configuration Studies

127 lines (25 storeys) – 6 rings
Instrumented volume 0.3 km³
Absorption length – 30m
Background – 100 kHz

Storey distance – 15 to 30 m

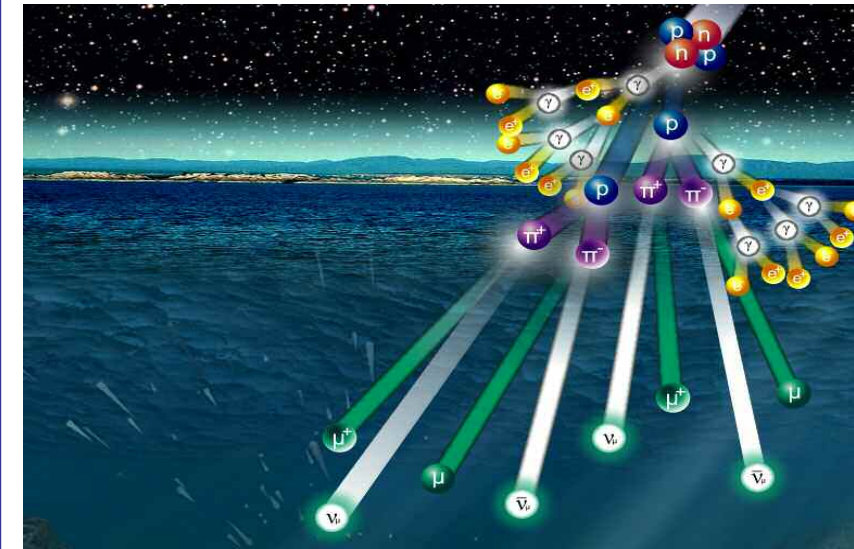

Angular resolution (5 TeV) ~ 0.09°

Angular resolution (5 TeV) ~ 0.08°

Galactic Sources

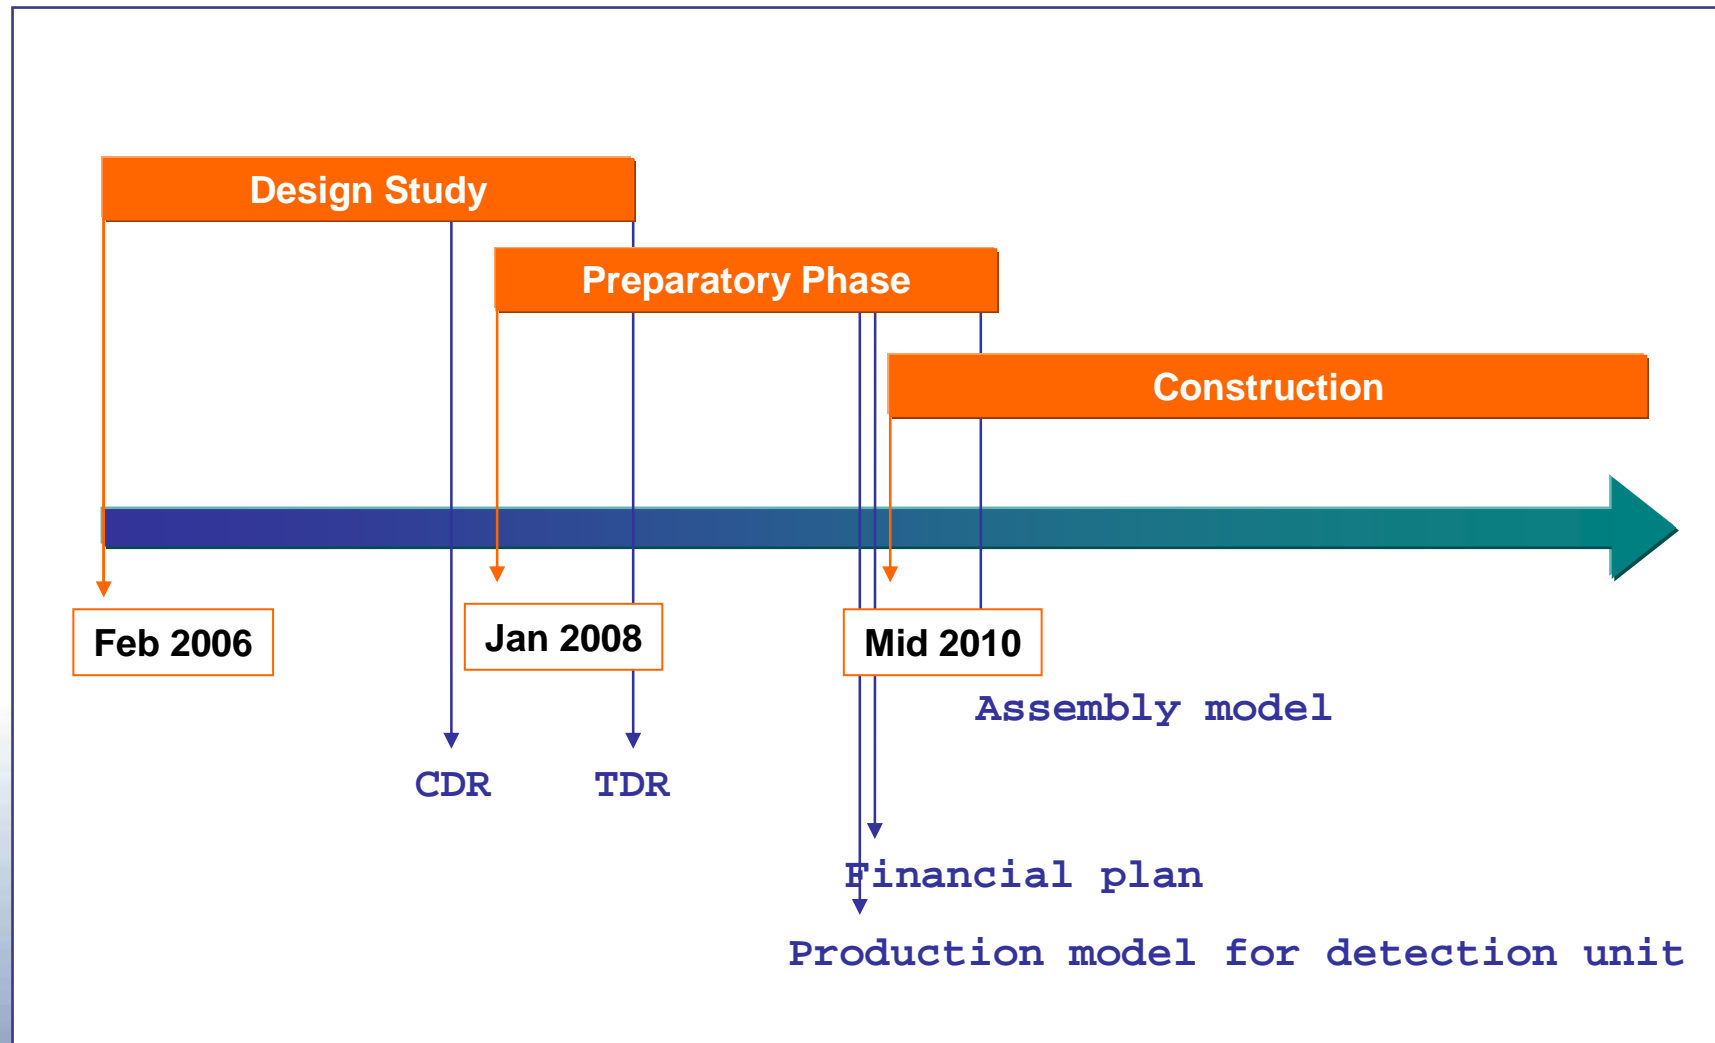

Method
Source characteristics <i>Kappes A. et al. Astrophys. J., 656, 2007</i>
Results
After oscillation

Name
Vela X
RXJ1713.7
RXJ0852.0

Ref. ICRC0865, J. Carr et al

Foreseen KM3NeT profile

Summary

KM3NeT is well on its way

Building on experience of existing telescopes
CDR workshop in November 2007

Complete chain of simulation

Event generator
Analysis tools
Astro sources
Preliminary cost model

First analysis with GRBs and AGNs seem
encouraging for the future.

(Ref. ICRC1067, R. White)

Next steps

Site selection
Optimisation of the effective area / price
International funding to build a few km³ telescope
